

INTRODUCTION

SURGE ABSORBER

Surge is derived from electro-magnetic energy, just as instant voltage change from flash thundering and motor starting, or pull off a socket under operating, etc. It is an untouchable, insensitive, invisible goods in circuit, and it always hide in power cord, communication and modem cord. It will cause error of modem transmitting or destroy of instrument. More seriously, it will endanger life of human body.

Currently, it is very sensitive of electronic circuit or parts against surge noise. It might destroy IC, and other electronic parts when high voltage surge into circuit. SPG-201M(301M)surge absorber will provide the protection of circuit installment and semiconductor parts when high voltage surge goes into circuit.

FEATURES

- A. Quick and repeated response.
- B. Small capacitance.
- C. Stably absorb surge.
- D. Small devices in electric circuit and no polarity.

TYPICAL APPLICATIONS

Devices connecting antenna or signal line Booster, Radio cassett, Car radio, Wireless set.
Devices that need Protection against electrostatic Display unit, Monitor, TV.
